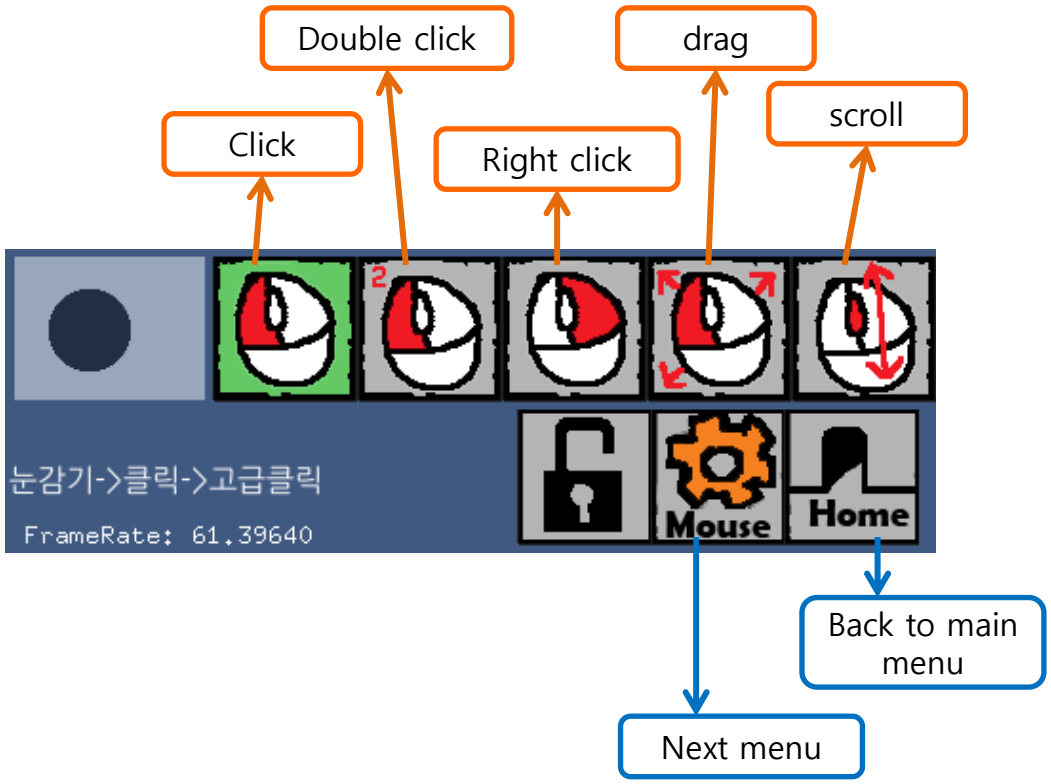
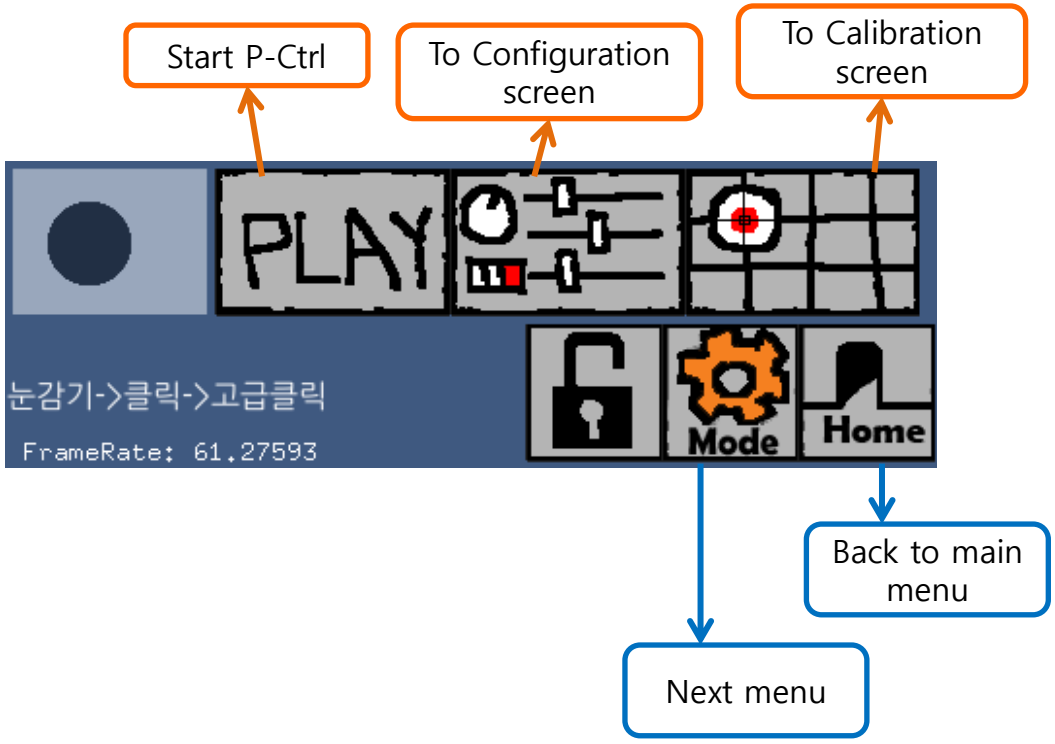
Basic Mouse Control



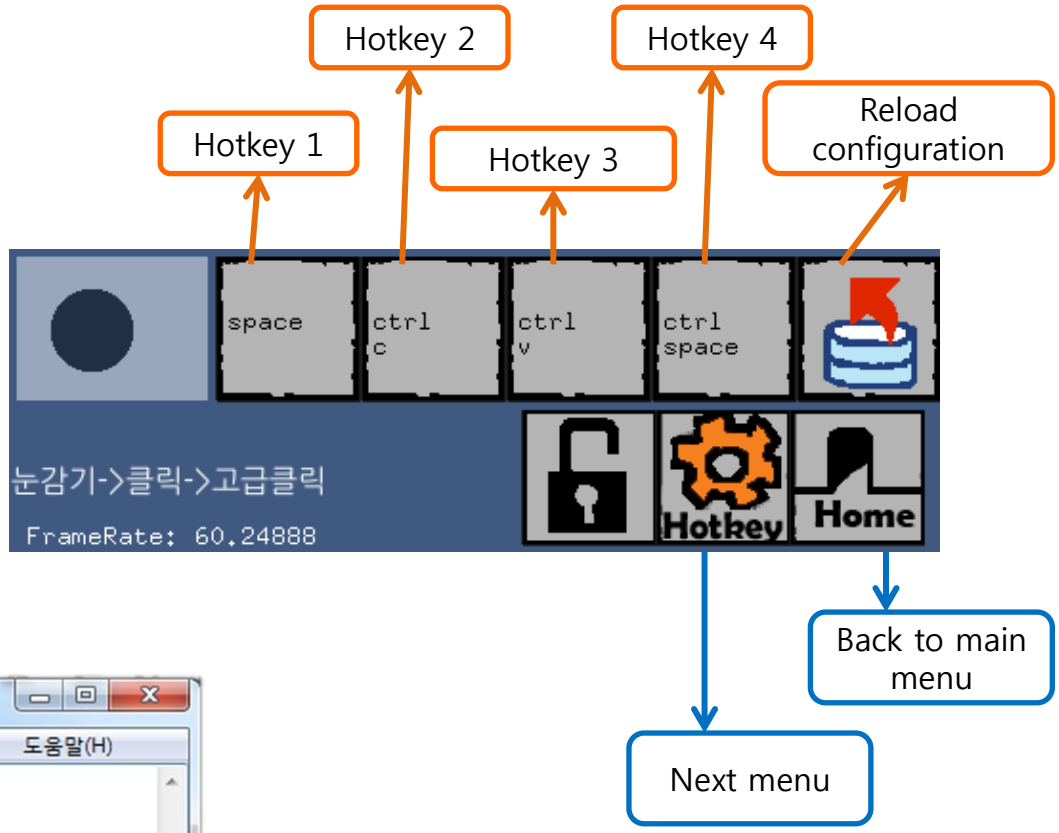
Click the click action you want to perform
If you click twice, the setting will be fixed.

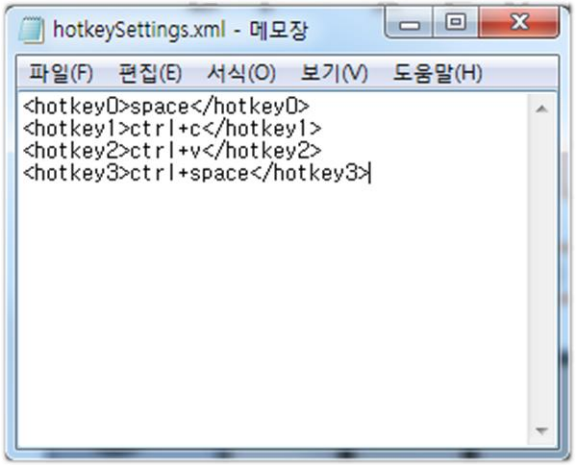
<Action state fixed to right click>

Changing Mode



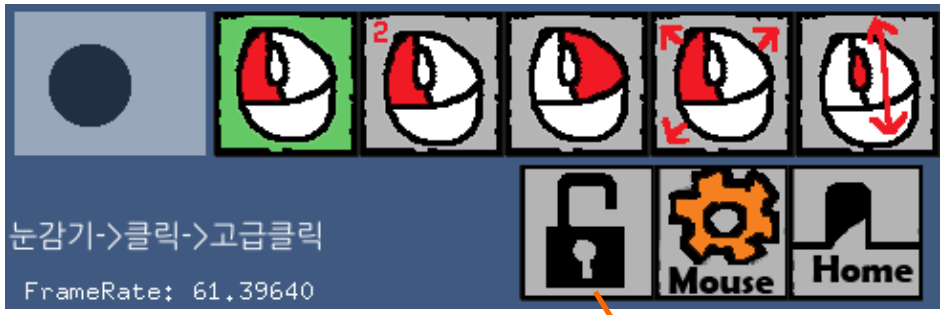
Hotkeys





In (eyeCan program folder)₩data₩settings folder, edit the hotkeySettings.xml file to change the hotkey settings.

Lock Mode



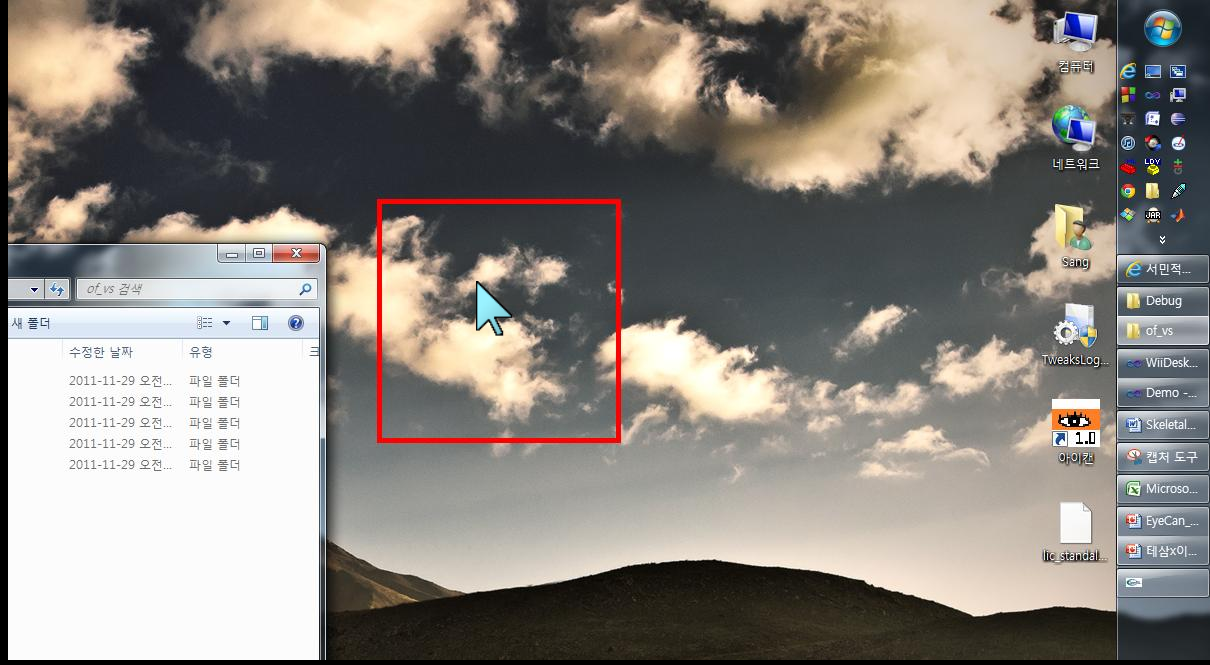
Lock

Lock to block any click events to the PC.
This may be useful when watching videos

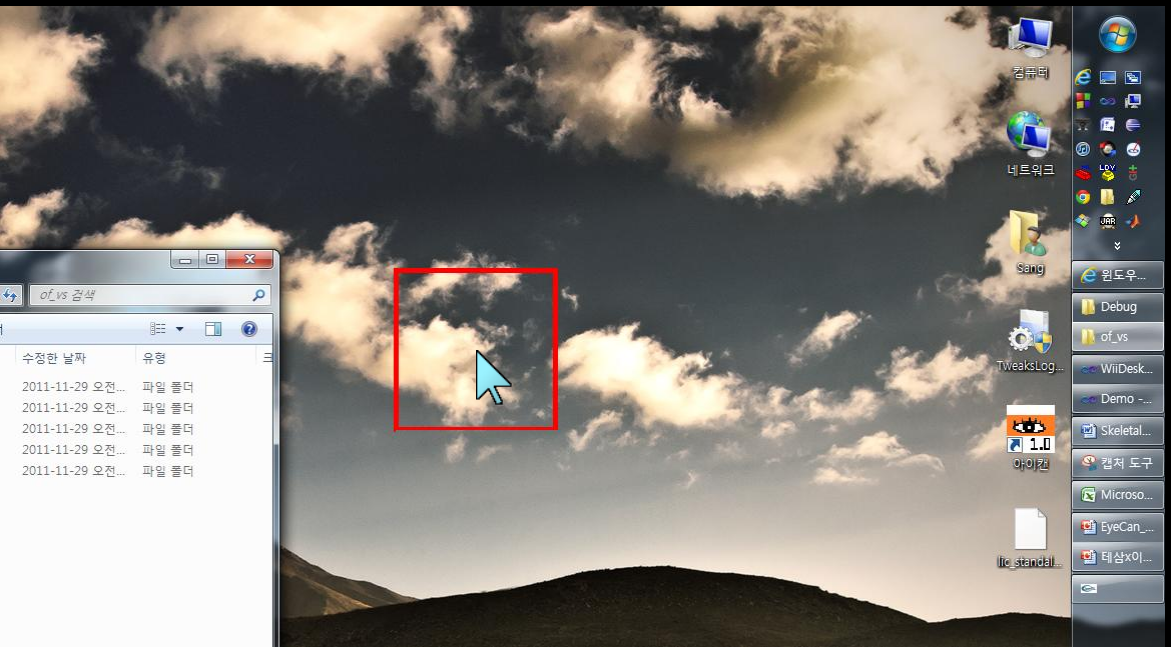
Advanced Click

How to
: perform long click (long blink) when using mouse

Description
: A box will appear on the screen. You can move the mouse cursor in the box by looking at 4-directions around the box. You may want to use this to perform click actions that requires greater accuracy. Long-click to cancel or go to Error compensation mode.



Advanced Uses



Error Compensation

How to
: perform long click (long blink) when using Advanced Click mode

Description
: When your calibration has gone wrong, you can make mouse cursor position offset to recover this calibration-off problem. Look at the center of the box for a while (for a few seconds) then the program will automatically compute the appropriate offset.
Long-click again to cancel.
